

Masonry Restoration Tague Lumber - Malvern Showroom

CONCRETE FLOOR REPAIR & POLISHING

Jamison Masonry Restoration was hired by building materials distributor Tague Lumber to repair and polish the concrete floor of their Malvern showroom. The work was completed in three sequential sections of 50' x 60' each to accommodate other trades, and included repair and caulking of all concrete cracks, damaged control joints, and miscellaneous defects, diamond grinding of the entire concrete floor to expose the underlying aggregate, and step-by-step graduated polishing to achieve a high-gloss finish. Completion of the work required application of the multi-phased Prosoco Consolideck System, achieving a durable, marble-like polish.
